Packaging and transport

Berol EP 25 should always be homogenized before use, unless the entire quantity is used. If Berol EP 25 is stored at temperatures below its clear point, a risk of separation occurs. Should this happen, the entire amount of Berol EP 25 should be melted and homogenized before use. A source of heat with a temperature of more than 100°C must not be used for melting Berol EP 25. The most suitable method is indirect heating with warm water.
