

Levasil OF110 WP

Colloidal silica

Levasil OF110 WP is an alkaline, aqueous dispersion of colloidal silica that is approximately 6% solids by weight. The silica dispersion is sodium stabilized and ethylene glycol is added for freeze stabilization and the amorphous silica particles carry a highly negative surface charge. The silica particles are structured to enhance the activity of the dispersion. The particles have also been surface modified with aluminum. The physical appearance of the dispersion is a clear liquid, slightly more viscous than water. Levasil OF110 WP is produced for world-wide distribution.

CAS number
7631-86-9

Characteristics

Silica	5.5 wt%
Density	1.06 g/cm ³
pH	8.5
Viscosity	20 cP

Applications

Levasil OF110 WP is a speciality product used primarily for water treatment within oilfield industries and is biocide free.

Storage

Levasil OF110 WP should be transported and stored at a temperature of -5-+35°C (23-95°F). The silica dispersion can be allowed to freeze up to five times before it precipitate. For bulk storage, the tank should be sealed and constructed of plastic, fiberglass reinforced plastic, or stainless steel. For packaged goods, any translucent packages should be stored out of direct sunlight or bright light. Under recommended conditions, Levasil OF110 WP has a shelf life of at least six months after production.

Packaging and transport

Levasil OF110 WP is available in bulk and packaged quantities.

Safety and handling

Before handling this material, review the corresponding Material Safety Data Sheet. Colloidal silica products are aqueous dispersions of amorphous silica. Colloidal silica is not classified as harmful, but as mildly irritating. Because the products can have a drying effect on the skin, protective gloves should always be used. In case of skin contact, wash the area of contact with plenty of water. The use of safety glasses is always recommended. In case of eye contact, rinse with large amounts of water and seek professional medical advice.
